# 2 Introduction

Prinillus.ch is an autonomous trader that listens to signals in the corresponding currency, and triggers either a buy or a sell of this currency. For this, Prinillus needs access to a trading-account.

As by now, the whole service is free of cost. Prinillus does not cost you a cent. Here should be said that every trading-platform has its own transaction-fees. As example, to trade with Binance, every transaction has a fee of ca. 0.1%

All Prices are in EURO.

## 3 Create a Trade-Account

To do this, just follow the steps from the Corresponding site.

3.1 Coinbase Pro Getting Started

3.2 Binance Getting Started

3.3 Kraken Getting Started

# 4 Open an API and register on prinillus.ch

As soon as you registered your account on one of those trading-platforms, you must set up an API. To do this, just follow the right tutorial.

### 4.1 Coinbase Pro

Go to pro.coinbase.com and sign in. Now you should see this trading-overview. Click on your Account in the upper right corner.

Now you can see the menu. Click on API.

You can now define your own API passphrase. Remember what you give in.

### 6 Let the System trade

Search for currency...

To let the system make your Trades, you have to navigate to Trading:

Prinillus	Home	Logout	Trading	Orders	Personal	Strategies	Proposals	

# You can tell the System, which Currency it has to trade with which Strategy and if trading is active.

You see which Currency, and then you have to choose which strategy, and if trading for this Currency is enabled. You set it per row, and then press on the save button.

The system will evenly split the orders on how many currencies you have enabled, and how much money is in your account.

As example, you have an account with 100 Euro. Then you enable 5 currencies. Now comes the first trigger and it buys BTC. You have 80 Euro and 20 Euro in BTC.
